

EBPMS

Electronic Brake Performance Monitoring System

DVSA's 'Guide to maintaining roadworthiness' section 5.3 - Braking performance assessment:

"In the case of trailers, an Electronic Braking Performance Monitoring System (EBPMS) may be used as a means to assess trailer-braking performance and provide a brake performance value while the vehicle is in service"

Axscend | TrailerMaster provides trailer tracking, fleet safety & compliance software solutions with a difference.

One of the main features is our patented EBPMS solution.

EBPMS monitors and records every break event as it happens, providing you with an easy to read graph against the DVSA pass mark, allowing you to track your brake performance efficiently keeping you compliant at all times.

We are helping fleets all over the UK dynamically monitor their trailers brake performance reducing the need for roller brake testing down to 'once' at annual MOT.

Taking TrailerMasters
EBPMS system was an
easy decision for us.

It helps us to stay compliant & removes the need for roller brake testing.
