

# TRACKING

Utilise our TrailerMASTER GPS tracking function to proactively manage your trailer fleet.

Never lose a trailer again and monitor utilisation to ensure you are maximising productivity from your fleet.

Toggle between Satellite & Map view to pin point trailer location.

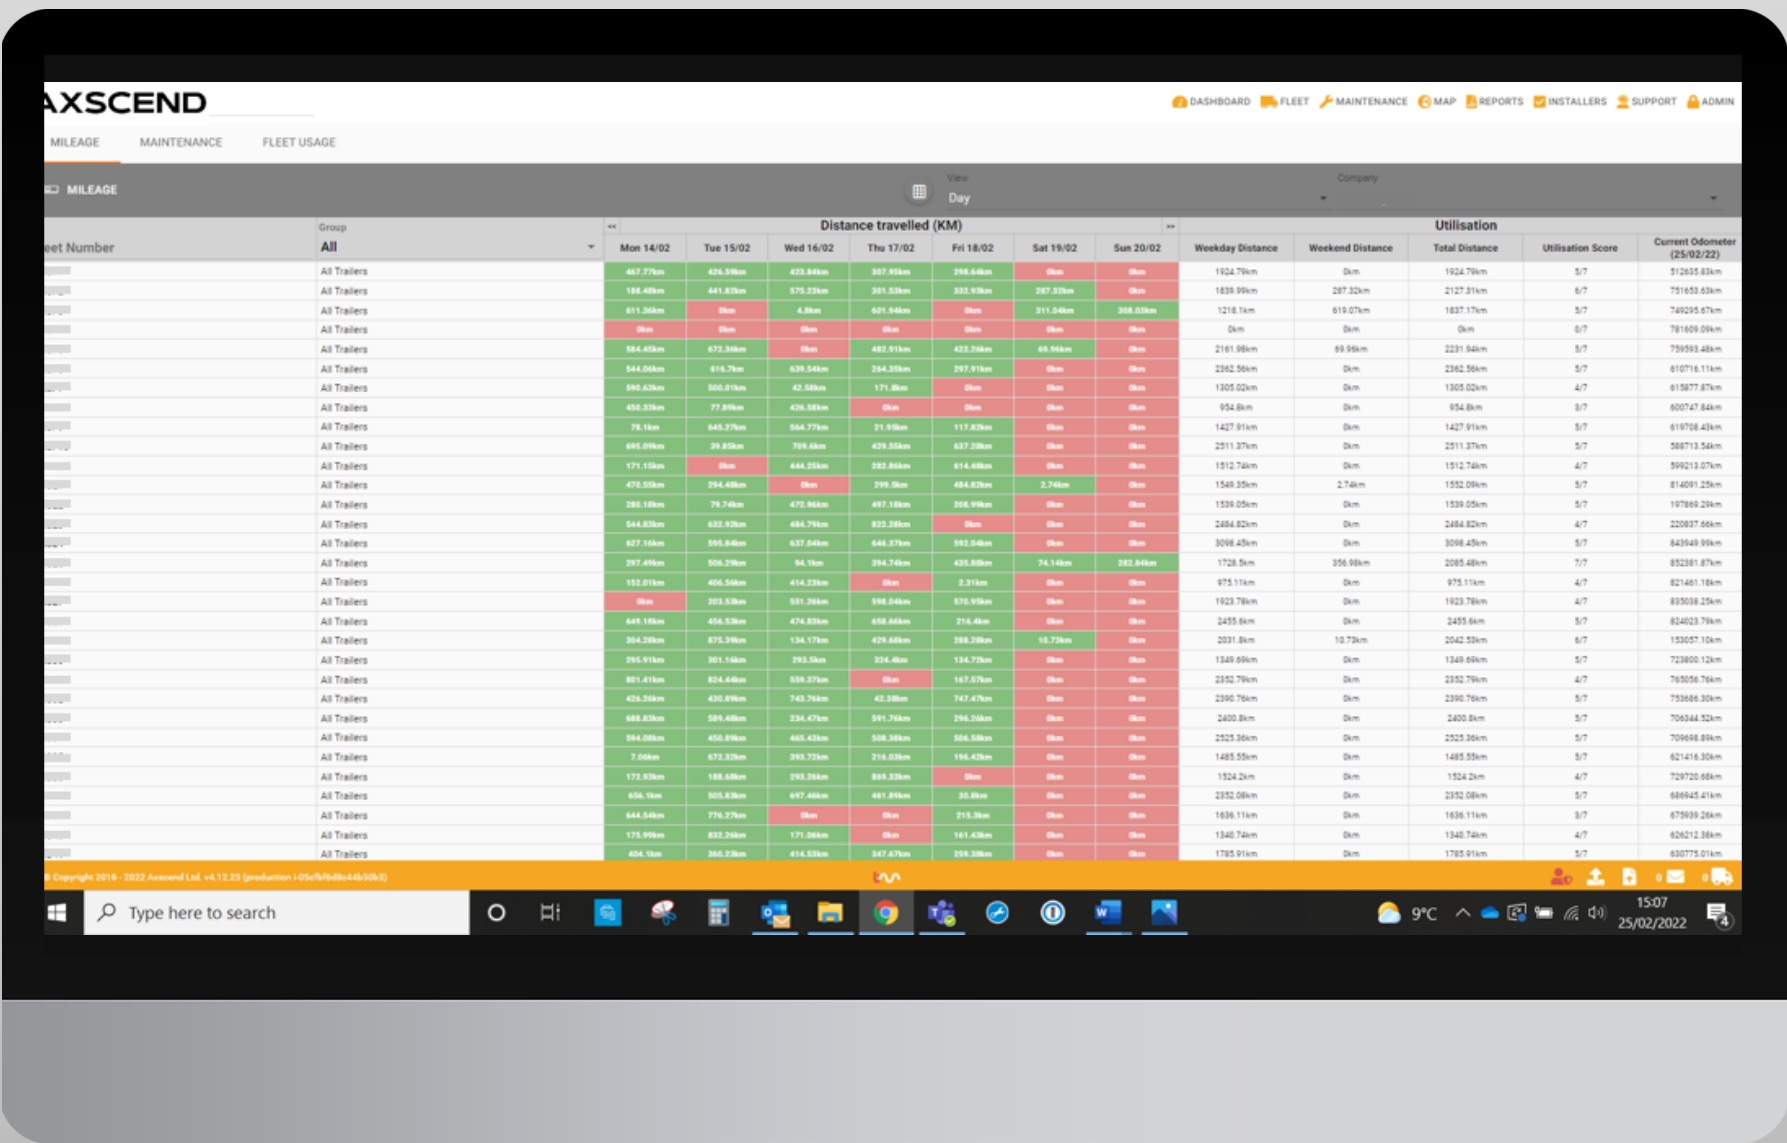

Identify trailers connected to units and moving with the touch of a button.

View playback of journeys to see exactly where trailers have been and download information direct to a 'CSV' file for further analysis.

Our fleet 'Analysis' screen provides a visual overview of utilisation.

Understand daily, weekly & monthly utilisation including mileage information ensuring you maximise trailer uptime.

Make informed decisions about your trailer fleet based on facts.

# POI & GEOFENCING

Create a 'POI' (Point Of Interest) or 'Geofence' on our feature rich map. Identify depot locations, customer premises or workshop facilities at the click of a button. What's more our map links with all the other great TrailerMASTER features allowing you to create alerts & notifications for a number of different reasons;

for example;

- Identify what's available in a given location with its current bogie weight.
- Send automatic email notifications when a trailer arrives at a customer location.
- Create & receive alerts when a trailer with a 'low pressure tyre' reading enters a depot maintaining optimal tyres saving you money in fuel and reducing the risk of failure.
- Alert 'Engineering / Fleet maintenance' as a trailer arrives at a POI with an EBPMs warning and take immediate action to rectify ensuring your trailers remain safe and compliant at all times.
