

Axscend | TRAILERMASTER Feature spotlight

TrailerMaster Connect allows you to respond quickly and easily to operational challenges. It not only reports on the status & location of your trailers, but also alerts you of any brake or tyre problems. This not only helps you remain compliant, it reduces downtime and provides protection for an operator against roadside prohibitions.

TrailerMaster key features

EBPMS or Electronic Brake Performance Monitoring System provides dynamic, live monitoring of your trailer's braking performance. It reduces the burden associated with frequent laden Roller Brake Testing and helps you remain compliant.

TPMS-Effective tyre pressure monitoring delivers year on year savings, as well as improved efficiency and safety.

DTC Monitoring-TrailerMaster will tell you the problems your EBS valve is reporting along with detailed explanations and manufacturer recommendations to resolve the problem.

Bogie Load Monitoring-TrailerMaster is capable of calculating the bogie load of your trailer.

- Identify trailers loaded and parked for long periods
- Identify trailers that are travelling empty for too many journeys
- Be alerted when trailers are overloaded
- Optimise your fleet to maximise load to mile ratio
- Coupled and uncoupled options available

Trailer Tracking-Instantly understand where all of your trailers are on our feature rich map. Proactively manage your trailer fleet & never lose a trailer again. Monitor utilisation to ensure you are maximising productivity from your fleet.
